**Re:** Betty Bioloski

This is to inform you that on this date the above referenced individual presented for evaluation at our offices. Releases were signed that allow our agency to inform you of treatment compliance. The client was cooperative throughout the session and appeared to be an accurate historian. Through client self report, clinical observation, and testing it appears that there is sufficient psychosocial impairment to warrant a DSM-IV diagnosis and therefore treatment is recommended.

The ASAM level was Level II and the SASSI indicated the client is at risk of complicating her self reported medical condition. Please contact us for a more detailed psychosocial assessment. For further information feel free to call me at 555-0512.
